Handy and attractive
Thurmo display

(24 x 22g)

Thurmo Stop-Leak is a legendary radiator sealant. There are many stories of the effect of this sealant that was originally produced in small cubes. It has been sold for over 40 years. Today it is produced in handy sales packets in powder form in Finland.

The strong reputation for **Thurmo Stop-Leak** is based on its advanced way of working. Thurmo dissolves quickly in hot radiator liquid, finds its way to the leaks and seals them with a permanent metallic seal on the outside of the leak.

Thurmo Stop-Leak is comprehensive, for instance it also repairs cracked blocks. Thurmo contains anti-corrosive chemicals and it lubricates the radiator system.

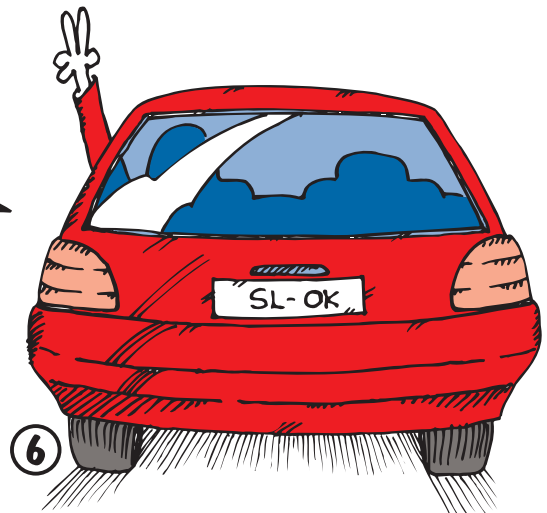

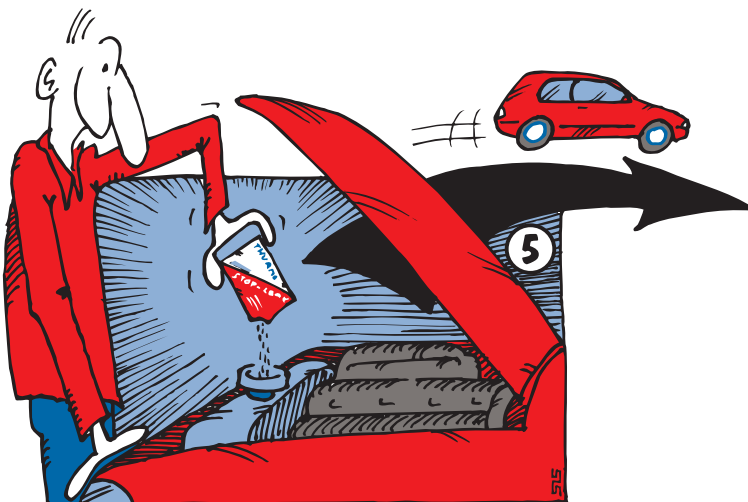

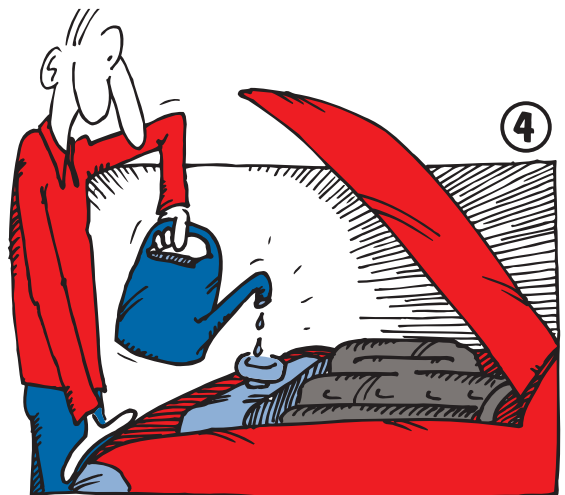

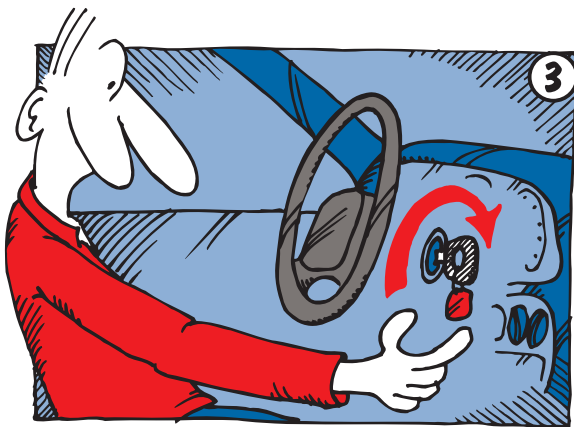

Thurmo Stop-Leak is tested by the VTT Finnish Technical Research centre. It is safe and harmless to all parts of the circulation system and will operate in any non-azid anti-freeze solution.
